

DIN rail mounting double action controller with analogue output, delta^{due}[®] series D3 line

Continuous control on DIN rail

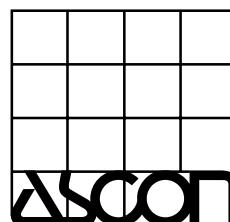

The delta^{due}[®] series includes one of the most advanced line of DIN rail mounting controller modules. The D3 line can satisfy almost every control application with the following features:

- Common bus for power supply and serial communications
- Totally withdrawable
- Easy replacement without switching off the power supply
- Digital input for remote commands
- Timer and Start-Up function
- Automatic tuning
- Open/Stop/Close output for electric actuators
- Singol action as well as heat/cool control
- Full integration with the delta^{due}[®] series data acquisition and control modules
- Easy integration with PC and PLC system
- Easy and simplified installation and maintenance

E

ISO 9001 Certified

Advantages and peculiarities

Keeping costs low

- Modular construction and compact dimensions
- Quick mounting on DIN rail
- Possibility of prewiring
- Common bus for power supply and serial communications

Wiring error reduction

High integration

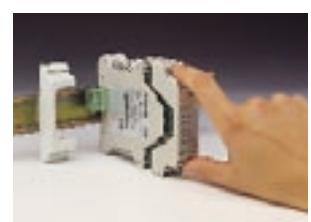

- Mounting on the machine or real panel
- Remote/centralised control
- RS485/CanBus
- Communications interface

- Withdrawable
- Easy replacement without switching off the power supply

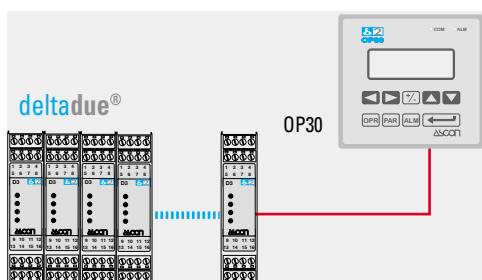

Easy maintenance

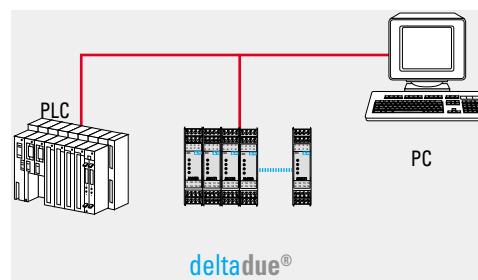

Typical applications

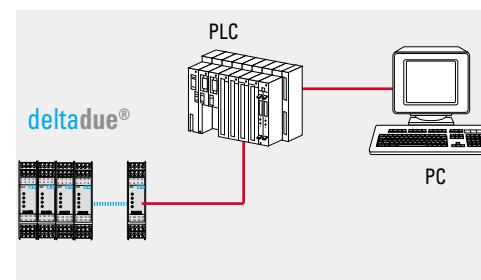

Local control with operator panel OP30

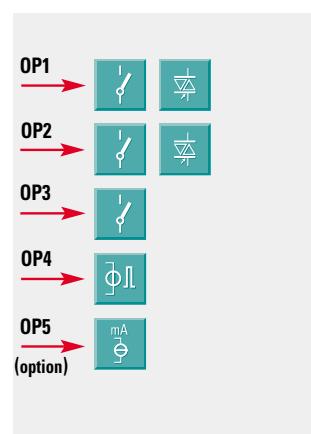

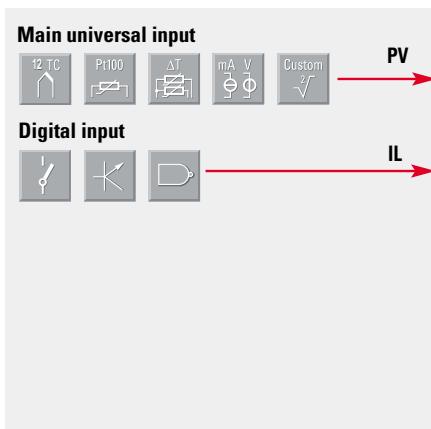

Distributed control with PLC and with dedicated modules for critical loops

Distributed control with PC supervision

Technical data

Features at env. 25°C	Description			
Total configurability	By means of the configuration tool it is possible to select: - type of input - the type of control input - type of output - type and functionality of the alarms - type of Setpoint - control parameter values			
PV input	Common characteristics	A/D converter with resolution of 50.000 points Update measurement time: 0.2 sec Sampling time: 0.5 sec Input bias: - 60...+ 60 digit Input filter: 1...30 sec. OFF = 0		
	Accuracy	0.25% ± 1 digit (for temperature sensor) 0.1% ± 1 digit (for mA e mV)	Between 100...240V~ the error is minimal	
	Resistance thermometer (for ΔT : R_1+R_2 must be <320Ω)	Pt100Ω at 0°C (IEC 751) °C/F selectable	2 or 3 wires connection Burnout (with any combination)	Line: 20Ω max (3 wire) Input drift: 0.35°C/10°C Env. Temp. <0.35°C/10Ω Wire Res.
	Thermocouple	L,J,T,K,S,R,B,N,E W3,W5 (IEC 584) °C/F selectable	Internal cold junction compensation with NTC Error 1°C/20°C ±0,5°C ± 0.5°C Burnout	Line 150Ω max. Input drift: <2µV/1°C Env. Temp. <5µV/10Ω Wire Res.
	DC input (current)	0/4...20mA, 2.5Ω ext. shunt Rj >10MΩ	Burnout. Engineering units, decimal point position configurable low range: -999...9999 high range: -999...9999 (min range of 100 digits)	Input drift: <0.1% / 20°C Env. Temp. <5µV/10Ω R. Wire Res.
Digital input	The closure of external contact produces any of the following actions:	Auto/Man mode change, Stored Setpoints activation, measure hold, Timer activation (if option installed)		
Operating mode	1 single or double action P.I.D. loop or ON/OFF with 1, 2 or 3 alarms			
Control mode	Algorithm	P.I.D. with overshoot control or ON/OFF PID with valve algorithm, for controlling motorised positioners		
	Proportional band (P)	0.5...999.9%	Singol action PID algorithm	
	Integral time (I)	0.1...100.0 min		
	Derivative time (D)	0.01...10.00 min		
	Error dead band	0.1...10.0 digit		
	Overshoot control	0.01...1.00	On/Off algorithm	
	Manual reset	0.0...100.0%		
	Cycle time (Time proportioning only)	1...200 sec		
	Control output high limit	10.0...100.0%		
	Soft-start output value	0.1...100.0% OFF=0		
	Output safety value	0.0...100.0% (-100...100.0% for Heat/Cool)	Double action PID algorithm (Heat/Cool) with Overlap	
	Control output hysteresis	0.1...10.0%		
	Dead band	-10.0...10.0%		
	Relative cool gain	0.1...10.0		
	Cycle time (Time proportioning only)	1...200 sec		
	Control output high limit	10.0...100.0%		
	Cool output hysteresis	0.1...10.0%		
	Motor travel time	15...600 sec	Valve drive PID algorithm without feedback potentiometer	
	Motor minimum step	to 0.1...5.0%		

Fuzzy-Tuning

Two methods of tuning are available:

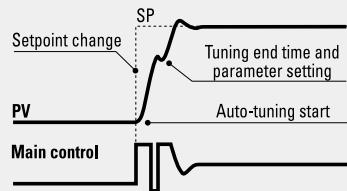

- **Auto-Tuning "one shot"**
- **Natural frequency "one shot"**

The **Fuzzy-Tuning** automatically selects one of the two methods which assures the best result for each condition.

The **Auto-Tuning** method works best on the step response basis.

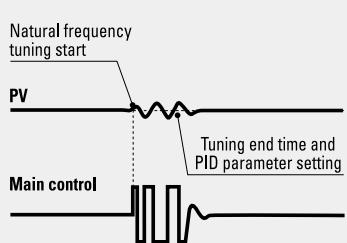

When activated, if a deviation exists between the Setpoint and process variable larger than 5% of scale range, the controller modifies the output value. Then, in a short time, it calculates the PID parameters and the new algorithm is operational immediately .

The main advantages of this method are fast calculation and quick implementation.

The **Natural frequency** method works best when the process variable is very near to the Setpoint. When activated, it causes a process oscillation around the Setpoint value.

The main advantage of this method is a reduced disturbance to the process .

Heat/Cool control

By a sole PID control algorithm, the controller handles two different outputs, one of these performs the Heat action, the other one the Cool action. It is possible to overlap the outputs. The Cool action can be adjusted using the relative cool gain parameter. The Heat and Cool outputs can be limited separately.

Technical data

Features at env. 25°C	Description						
OP1-OP2 outputs	SPST Relay N.O., 2A/250V~ for resistive load SSR, 1A/250V~ for resistive load To meet the double isolation requirements OP1 and OP2 must have the same load voltage						
OP3 output	SPST Relay N.O. 2A/150V~ for resistive load						
OP4 output	Logic not isolated: 0/5V-, ±10% 30 mA max						
OP5 Analogue output (option)	Control or PV/SP retransmission	Galvanic isolation: 500V~/1 min Resolution: 12 bit Accuracy: 0.1%	In current: 0/4...20mA, 750Ω/15V max				
AL1- AL2 - AL3 alarms	Hysteresys	0.1...10.0%					
	Action	Active high Active low	Action Type Band threshold 0...range Absolute threshold whole range				
		Special functions	Sensor break, Loop break Acknowledge (latching), activation inhibit (blocking)				
			Connected to Timer (if option installed)				
Setpoint	Local	Up and down ramps 0.1...999.9 digit/min. (OFF=0) Low limit: from low range to high limit. High limit: from low limit to high range					
Special functions (options)	Timer	Automatic start at the power on, manual start by digital inputs or serial comm.s Setting time: 1...9999 sec/min Stand-by Setpoint: $SCL\ 0 \leq SPSU \geq SLE\ 1$					
	Start-up	Start-up Setpoint: Hold time: Control output high limit					
Fuzzy-Tuning one shoot	The controller selects automatically the best method according to the process conditions	One shot Auto Tuning One shot Natural Frequency					
Auto/Man station	Standard with bumpless function, by digital input or serial communications						
Serial Comm.s	RS485 isolated, Modbus/Jbus protocol, 1200, 2400, 4800, 9600 bit/sec, two wires						
Auxiliary Supply	+24V- ± 20% 30mA max - for external transmitter supply						
Operational Safety	Measure input	Detection of out of range, short circuit or sensor break with automatic activation of the safety strategies					
	Control output	Safety value: -100%...100%					
	Parameters	Parameter and configuration data are stored in a non volatile memory for an unlimited time					
	Outputs lock						
General characteristics	Power supply (PTC protected)	24V~ (-15% +25%) 50/60Hz and 24V-(dc voltage) (-15%+25%)	Power consumption 3W max				
	Safety	EN61010-1 (IEC1010-1), installation class 2 (2500V) pollution class 2, instrument class II					
	Electromagnetic compatibility	Compliance to the CE standards					
	Protection	Terminal strip IP20					
	Dimensions	Pitch: 22.5 mm - depth: 114.5 mm width: 53					

Digital input

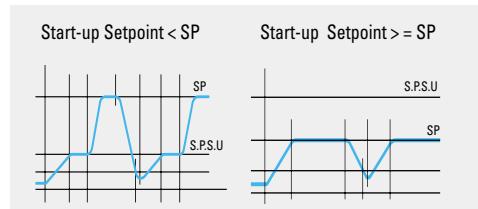

The digital input can be configured to have one of the following functions:

- Measure hold
- Auto/Man switching
- Stored Setpoint activation
- Timer activation

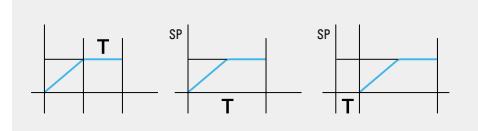

Special functions

To improve the instrument performance and to reduce the wiring and installation costs, two special functions are available:

- Start-up

- Timer

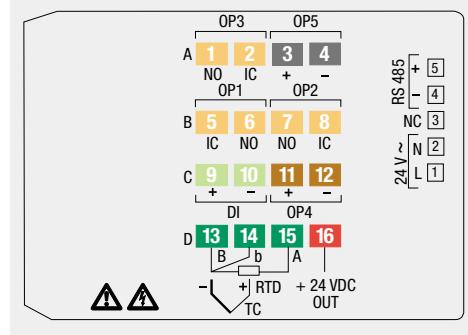

The use of these functions avoids additional device installation (e.g. external timer), therefore allowing a significant costs reduction .

Moreover there are

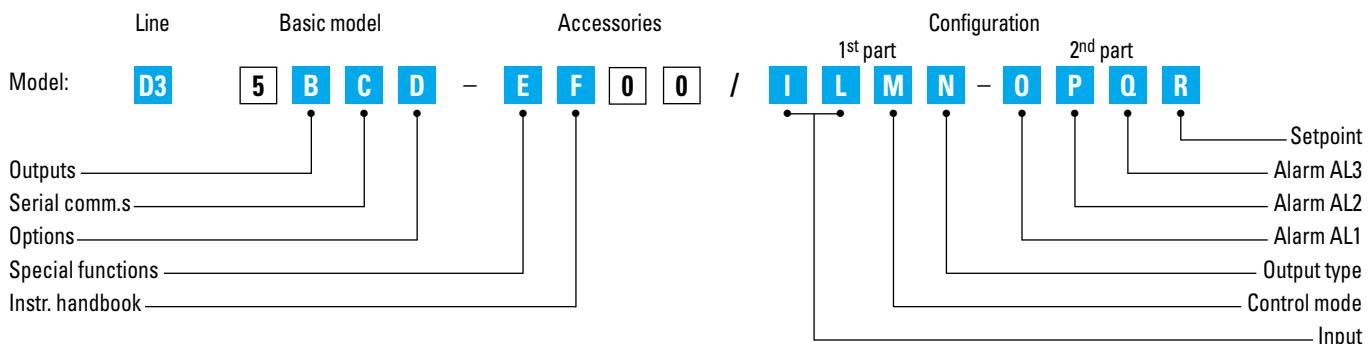

• Output lock function,

The outputs can be switched to the OFF status via serial communications.
