

## Index

### Anchor/Darling Valves

Anchor/Darling nuclear-grade gate, globe and check valves are capable of handling erosive slurries, cryogenic, high temperature/high pressure, corrosive, and other severe services.

### Atomac Lined Valves

Atomac lined valves consist of a wide offering of lined ball valves, tank drain valves, sight glasses, check valves, strainers, and combined check/sight glass valves.

### Automax Valve Automation Systems

Automax valve automation systems include a broad range of rack and pinion, scotch-yoke and electric actuators for mounting on quarter-turn ball, plug and butterfly valves.

**Index**

**Durco Quarter-turn Valves**

Durco quarter-turn valves consist of manually operated plug, ball and butterfly valves, which are available in a wide range of materials, linings and body styles. Durco valves are especially well-suited for adaptation to quarter-turn actuation systems.

**Kammer Control Valves**

Kammer control valves are specifically designed for niche applications and include split, globe, cryogenic, angle, and plastic body styles. The body design is extremely versatile, allowing for the addition of low and micro-flow trim and metal bellows for zero fugitive emissions.

**Valtek Control Products**

Valtek control products represent a broad range of high performance control valves — as well as advanced digital control products for use on valves. The Valtek control valve line includes rotary eccentric/cammed disc, globe, rotary eccentric plug, ball, and severe service valves.
